

## Cable Labelling Service

### Using thermal adhesive wrap around labels

Clearly identified cabling helps reduce costly installation time and makes future re-patching or cable tracing easier and quicker.

With our cable labelling service your cables can be delivered pre-labelled ready for deployment, saving time and making cable management more effective.

Labels are applied using the Brady Wraptor Wrap Printer Applicator to automate the labelling process and deliver consistent placement and secure adhesion of every label. High quality, durable acrylic labels are printed via thermal transfer and provide outstanding moisture, heat and oil resistance for a finish far superior to traditional hand applied labels.
